

WORLD ENVIRONMENT DAY

Organized by:	School of Nursing
Date of Activity:	05 June 2025
Duration:	One Day
Venue:	Sub District Hospital Premnagar, Dehradun , Uttarakhand
Participants:	B.Sc. Nursing IV th semester
Resource Persons/Experts/Guests	Mr. Naval Pundeer

Aligned SDGs

Rationale for SDG Linkage

- The activity directly contributes to climate mitigation by planting trees to sequester carbon and educating the community on reducing plastic waste, which lowers the carbon footprint associated with plastic production and disposal.
- It also contributes to climate mitigation by planting trees to sequester carbon and educating the community on reducing plastic waste, which lowers the carbon footprint associated with plastic production and disposal.

Objectives of the Activity

- To raise awareness by educating the community on the dangers of plastic pollution to health and nature.
- To promote sustainability by Encouraging the shift from single-use plastics to eco-friendly habits.
- To foster Creativity by Using artistic expression and posters to spread vital environmental messages.

- To promote practical actions by organizing hands-on campus activities like clean-up drives and tree plantations.

Description of the Activity

The theme of this event was “Ending Plastic Pollution Globally” thus its initiative focused on combating plastic pollution and nurture sustainability through a blend of education, creative expression, and direct community action. The activity engages students in sustainable practices like reducing single-use plastics while mobilizing the campus for hands-on ecological restoration, including clean-up drives and tree plantations.

Outcomes of the Activity

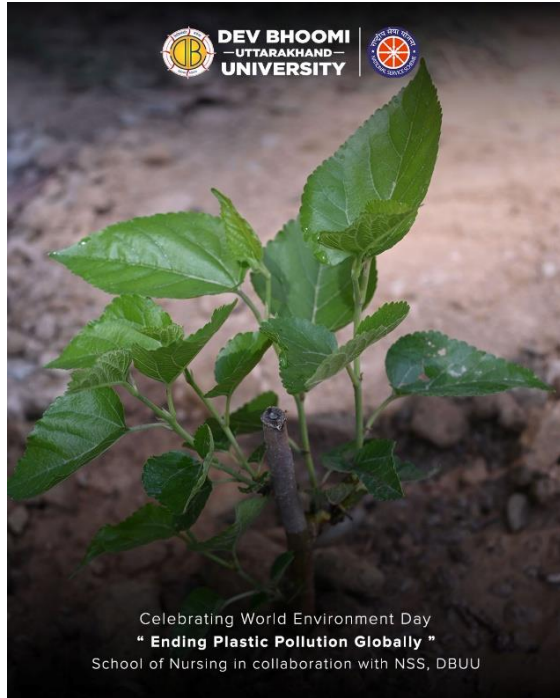

The environmental drive resulted in immediate ecological restoration through the thorough removal of plastic waste and the successful planting of new saplings to boost biodiversity. Beyond the visible impact of enhanced campus aesthetics and improved air quality, the event successfully triggered a behavioral change by sensitizing students to the link between pollution and public health. This collective effort fostered a long-term commitment to sustainable waste management and a measurable reduction in single-use plastic consumption across the campus community.
